

EMLC

VanEck J. P. Morgan EM Local Currency Bond ETF Analyst Report

This ETF offers exposure to debt of emerging markets issuers that is denominated in local currencies, making it a potentially attractive option for investors interested in diversifying fixed income exposure beyond U.S. borders. This asset class can be valuable both as a hedge against the U.S. dollar and as a means for enhancing current returns in low interest rate environments. Unlike EMB and PCY, this ETF focuses on debt denominated in the currency of the issuers. EMLC is one of several nice options available for emerging markets bond exposure, and this ETF is among the most efficient from a cost perspective.
