

HYDW

Xtrackers Low Beta High Yield Bond ETF

Analyst Report

The Xtrackers Low Beta High Yield Bond ETF (HYDW) tracks an index of “junk” bonds — debt issued by borrowers with a higher risk of default — that exhibit lower market beta — jargon used to describe how volatile performance is relative to the market. It’s another way of saying HYDW tries to be less risky than the overall high-yield debt market. Investors should expect less of a bumpy ride than the Xtrackers USD High Yield Corporate Bond ETF (HYLB), which offers broad exposure to the high-yield debt category.

HYDW is priced competitively and has attracted a decent amount of assets since its 2018 launch. HYDW might be a good choice for investors who want the higher returns that come with the risk of junk debt, but want to mitigate some of that risk by tilting toward higher quality issuers.
