

SOXQ

Invesco PHLX Semiconductor ETF

Analyst Report

The Invesco PHLX Semiconductor ETF track a market-cap weighted index of the 30 largest U.S.-listed companies engaged in the semiconductor business, such as memory chips, microprocessors, integrated circuits and other related equipment. Eligible securities must have a market capitalization of at least \$100 million and must meet certain daily trading thresholds. Invesco launched the fund in June 2020 with a temporary fee waiver that knocked the expense ratio to zero. Even without the waiver, SOXQ dramatically undercut the fees of similar ETFs in the same industry. The ETF quickly picked up assets but it has a long way to go to catch up to established rivals. Traders looking for short-term liquidity may want to compare trading against competing funds. For investors making a longer-term play, Invesco's fund fees are hard to beat, though it's worthwhile to comparison shop since the ETF industry has a long history of price wars.
