

XMMO

Invesco S&P MidCap Momentum ETF

Analyst Report

The Invesco S&P MidCap Momentum ETF tracks an index of U.S. mid-cap stocks that exhibit strong price momentum. The methodology begins with the S&P MidCap 400 Index and assesses the percentage change in the stock price in the past 12 months, excluding the most recent month, and then adjusts for volatility. Approximately 80 of the top scoring stocks are included in the index. The portfolio is weighed based on a combination of companies' market capitalization and momentum scores. The fund fees are reasonable for a mid-cap factor strategy, though there are cheaper ultra-low-cost options in the mid-cap market. The strategy is too targeted for most buy-and-hold investors, but may suit a tactical investor who wants to apply a momentum overlay to their mid-cap exposure. Prior to June 21, 2019, the fund tracked an index of mid-cap growth stocks.
