Investing involves risk, including the possible loss of principal. Narrowly focused investments typically exhibit higher volatility. The fund is non-diversified.

Shares are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Market price returns are based upon the midpoint of the bid/ask spread at the close of the exchange and do not represent the returns an investor would receive if shares were traded at other times. Brokerage commissions will reduce returns. NAVs are calculated using prices as of 4:00pm ET.

Since the Fund's Shares typically do not trade in the secondary market until several days after the Fund's inception, for the period from inception to the first day of secondary market trading in Shares, the NAV of the Fund is used to calculate market returns.

Carefully consider the fund's investment objectives, risk factors, charges, and expenses before investing.
