Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate, so you may have a gain or loss when shares are sold. Current performance may be higher or lower than that quoted. Visit spdrs.com for most recent month-end performance.

The market price used to calculate the Market Value return is the midpoint between the highest bid and the lowest offer on the exchange on which the shares of the Fund are listed for trading, as of the time that the Fund’s NAV is calculated. If you trade your shares at another time, your return may differ.

Performance of an index is not illustrative of any particular investment. It is not possible to invest directly in an index.

After-tax returns are calculated based on NAV using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on the investor’s tax situation and may differ from those shown. The after-tax returns shown are not relevant to investors who hold their fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. The gross expense ratio is the fund's total annual operating expenses ratio. It is gross of any fee waivers or expense reimbursements. It can be found in the fund’s most recent prospectus.

±Frequent trading of ETFs could significantly increase commissions and other costs such that they may offset any savings from low fees or costs.

*Passive management and the creation/redemption process can help minimize capital gains distributions.

The S&P 500 Index is an unmanaged index of 500 common stocks that is generally considered representative of the U.S. stock market. The index is heavily weighted towards stocks with large market capitalizations and represents approximately two-thirds of the total market value of all domestic common stocks. The S&P 500 Index figures do not reflect any fees, expenses or taxes.

‡Subject to Change.

All ETFs are subject to risk, including possible loss of principal. Sector ETF products are also subject to sector risk and non-diversification risk, which generally result in greater price fluctuations than the overall market. Select Sector SPDR Funds bear a higher level of risk than more broadly diversified funds.

Risk associated with equity investing include stock values which may fluctuate in response to the activities of individual companies and general market and economic conditions.

Non-diversified funds that focus on a relatively small number of securities tend to be more volatile than diversified funds and the market as a whole. There are no sales loads on Select Sector SPDR shares but ordinary brokerage commissions apply and this expense is not reflected in performance calculations.

While the shares of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of market stress.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

Definitions: Pre-liquidation represents returns after taxes on distributions, assuming shares were not sold. Post-liquidation represents the return after taxes on distributions and the sale of fund shares. Market Value is determined by the midpoint between the bid/offer prices as of the closing time of the New York Stock Exchange (typically 4:00PM EST) on business days. NAV is the market value of a mutual fund’s and ETFs total assets, minus liabilities, divided by the number of shares outstanding. An Intraday NAV is calculated and published throughout the trading day. It is based on the last trade price of each holding listed in the basket used for creation and redemption including estimated cash amounts. This value is used to provide an intraday relationship between the basket of securities representing the ETF and the market price of the ETF. The Estimated 3-5 Year EPS Growth is based on the underlying holdings of the fund. The actual earnings estimates for the underlying holdings are provided by Factset, First Call, I/B/E/S Consensus, and Reuters and are used to calculate a mean 3-5 year EPS growth rate estimate, this measure is not a forecast of the fund’s future performance. FY 1 P/E Ratio is the closing price divided by the sum of the forecasted fiscal year earnings per share. Price/Book Ratio is the current market price of the stock divided by the most recently reported book value for the prior fiscal year.
