

# ACSG

## American Century Small Cap Growth Insights ETF

### Fund Description

ACSG is an actively managed ETF investing in US small-cap companies with accelerating growth rates and improving fundamentals. The fund seeks long-term capital growth through a bottom-up, research-driven approach supported by systematic portfolio construction.

### FactSet Analyst Report

ACSG focuses on US small-cap companies demonstrating accelerating growth and improving fundamentals. The portfolio managers use proprietary bottom-up research and structured portfolio construction to identify firms with rising earnings or revenue trajectories, including those transitioning from negative to positive growth trends. Emphasis is placed on companies showing improving business momentum or relative price strength compared with peers. This approach combines company-level analysis with a framework that manages portfolio risk and capacity while seeking to make stock selection the primary source of returns. Holdings are typically sold when a company's outlook weakens, its characteristics no longer fit the growth profile, or stronger opportunities emerge. The strategy's active nature may lead to higher turnover as the fund adjusts to changing fundamentals and market dynamics.
