

AGNG

Global X Aging Population ETF

Fund Description

AGNG tracks a market-cap-weighted index of companies from developed markets, whose revenue or main business purpose is tied to enhancing and elongating the lives of senior citizens.

FactSet Analyst Report

AGNG invests in companies involved in lifespan extension and improved quality of life efforts for an aging population. The fund uses a proprietary research and analysis in selecting its securities. The selection process crosses traditional sector lines to incorporate a variety of businesses located in developed countries, whose primary business is involved in medical devices, healthcare services and facilities, pharmaceutical companies, insurance companies, assisted living products and services, and consumer products. Reconstituted and rebalanced annually, AGNG is weighted by modified market-cap wherein a single security cap of 3% and a single security floor of 0.3% are applied. The balance weight is then proportionally distributed among the non-capped securities. A 60% industry cap is also applied. Prior to April 1, 2021, AGNG traded as Global X Longevity Thematic ETF under the ticker, LNGR. The fund tracked the Indxx Global Longevity Thematic Index prior to April 9, 2021.
