

# BUL

## Pacer US Cash Cows Growth ETF

### Fund Description

BUL tracks a market cap-weighted index of large- and mid-cap US growth equities selected using fundamental factors.

### FactSet Analyst Report

BUL centers around what are known as cash cows, or companies with high free cash flow yields. The fund starts with a pool of US large- and mid-cap growth stocks, screened based on their average projected free cash flows and earnings over each of the next two years. Remaining growth equities are then ranked according to free cash flow and the top 50 securities will comprise the funds concentrated portfolio. At each quarterly rebalance, selected securities are weighted by market cap with each individual security capped at 5% weight.
