

CPRA

Calamos Russell 2000 Structured Alt Protection ETF - April

Fund Description

CPRA seeks to track the return of the iShares Russell 2000 ETF (IWM), to a cap, with 100% downside hedge over a one-year outcome period. The actively managed fund holds FLEX options to obtain exposure. The fund aims to outperform cash holdings.

FactSet Analyst Report

CPRA invests all of its assets in FLEX options. The option position seeks to generate returns that match the performance of IWM shares, up to a cap, while protecting against 100% of losses, over a one-year period. The upside cap is reset every year, at the beginning of April. Shareholders should note they will not receive any dividends. The objective focuses on the potential growth over a specific defined time. The outcome pursued may only be possible if an investor were to hold the shares for the entire outcome period. However, there is no guarantee that the defined outcome of the strategy pursued will be realized by investors. The targeted buffers and caps do not include the fund's expense ratio.
