

CSEN

Cohen & Steers Future of Energy Active ETF

Fund Description

CSEN is an actively managed, high-conviction approach to investing in energy companies across the full value chain. The ETF that contains exposure to both traditional and alternative energy companies.

FactSet Analyst Report

CSEN is an investment strategy that provides access to the full energy value chain, spanning both traditional and alternative energy markets across producers, enablers, and developers. The investment premise is that demand for energy is increasing, driven by population growth, rising data intensity, and AI adoption. This increase in power demand is changing how energy is produced, transported, stored, and consumed. Unlike conventional strategies that focus narrowly on either traditional or alternative energy, CSEN broadens the opportunity set across both markets while reducing single-market risk, leveraging flexible, high-conviction active management. This ETF launched through the conversion of a mutual fund that provided the same strategy and \$189 million in assets.
