

DAPP

VanEck Digital Transformation ETF

Fund Description

DAPP tracks a market-cap-weighted index of global innovative companies that are involved in the digitalization of the world's economy through a diverse range of digital assets.

FactSet Analyst Report

DAPP offers pure-play exposure to companies leading the digital transformation of the economy through digital assets without geo constraints. The funds underlying index is composed of diversified companies of all capitalization defined as Digital Assets Stocks which derive at least 50% of their revenue from digital assets projects. These companies include digital asset exchanges, payment gateways, miners, equipment, technology, and service providers, digital asset infrastructure businesses, and e-commerce. Eligible securities are ranked in terms of market-cap with the top 85% qualified for inclusion. The largest 25 ranking companies are chosen as index constituents and are then weighted by market-cap with single security capping at 8%. The index is reconstituted and rebalanced quarterly.
