

DUKH

Ocean Park High Income ETF

Fund Description

DUKH is an actively managed fund-of-funds that tactically allocates assets across high-yield fixed income ETFs that are unconstrained by maturity or geography. The fund seeks to provide total return while mitigating downside risk.

FactSet Analyst Report

DUKH invests in unaffiliated high-yield fixed income ETFs using a proprietary trend-following strategy. The underlying ETFs, which could be passively or actively managed, may invest in government and corporate high-yield bonds of any maturity from around the world. The fund expects to allocate nearly all its assets to these ETFs. In selecting investments, the fund adviser determines buy and sell signals by calculating the upper and lower bands of the short-term exponential moving averages. A buy signal is initiated when a potential uptrend in a candidate ETF is detected. To limit drawdowns of the overall fund, an ETF is sold when a sell signal is identified. In the absence of uptrends, the fund may reinvest in US Treasury ETFs and/or cash equivalents. It applies the same trend-following strategy for Treasury ETFs. The fund is not limited by any constraints on the number or type of underlying ETFs it may invest in. The adviser periodically reviews and adjusts the allocation of the fund.
