

EAGL

Eagle Capital Select Equity ETF

Fund Description

EAGL is an actively managed fund that invests in value stocks from around the globe, selected based on the advisers estimate of long-term intrinsic value. The ETF converted from a separately managed account.

FactSet Analyst Report

EAGL seeks to outperform the US equity markets through a narrow exposure to global value stocks. The actively managed fund generally holds 15-35 stocks assessed based on the advisers estimate of their long-term intrinsic values. The belief is that there is an opportunity to capture excess returns through a longer-term perspective. Thus, several investments of the fund are expected to be made with a five to seven-year holding period. The portfolio is constructed using a fundamental analysis that considers business changes, growth prospects, margins, industry factors, and valuation scenarios over the next 5 to 10 years, which seeks to identify a margin of safety based on valuation discount, resilience, growth opportunities, and strong management. The fund primarily focuses on US stocks and large-cap companies. However, the fund may invest in companies of any size and geographic location, including emerging markets. EAGL launched by converting an SMA with \$1.8 billion in assets.
