

EALT

Innovator U.S. Equity 5 to 15 Buffer ETF - Quarterly

Fund Description

EALT aims to participate in the price movement of the SPDR S&P 500 ETF (ticker: SPY), up to a cap while buffering the first 5-15% decline. The fund resets its buffer and cap levels every three months. The actively managed fund holds FLEX options.

FactSet Analyst Report

EALT actively manages FLEX options in efforts to participate in the price return of the SPDR S&P 500 ETF Trust (SPY), up to a cap, and provide partial downside protection over a three-month outcome period. The fund foregoes some upside return as well as the S&P 500s dividend component, because the options are written on the price (not total) return version of the index. In exchange for preventing realization of the first 5-15% of the losses in value of SPY shares, investors forego upside participation above a certain threshold, which is reset quarterly. Investors who buy at any other time than the quarterly reset day may have a very different protection and buffer zone. The issuer publishes effective interim levels daily on its website. The fund must be held to the end of the outcome period to pursue the intended results. The targeted buffers and caps do not include the funds expense ratio, which should be deducted from potential return.
