

# EKAR

## Capital Link NextGen Vehicles & Technology ETF

### Fund Description

EKAR tracks an equally-weighted index that uses a proprietary methodology to select global stocks involved in the investment, development, or use of new energy and autonomously driven vehicles, battery technology, renewable energy, and energy storage.

### FactSet Analyst Report

EKAR identifies global companies involved with new energy and autonomously driven vehicles, battery technology, renewable energy, and energy storage using a natural language processing (NLP) algorithm to scan large volumes of textual data, media platforms, and databases. Stocks are sorted into one of five categories: battery producers, original equipment manufacturers, suppliers, semiconductor and software companies, and renewable energy producers. The fund uses a proprietary ranking methodology to select firms within each category. Holdings are weighted equally and rebalanced semi-annually. The fund tracked the Innovation Labs Next Generation Vehicles Index under the name Ideanomics NextGen Vehicles & Technology ETF until Nov. 6, 2020. Prior to Dec. 16, 2021, the fund and index names were Capital Link NextGen Vehicles & Technology ETF and ATFI NextGen Transport Technology Index, respectively.
