EMET

VanEck Copper and Electrification Metals ETF

Fund Description

EMET tracks a market cap-weighted index of global companies across the value chain of critical metals used in worldwide electrification efforts, including production, refining, processing, and recycling.

FactSet Analyst Report

EMET is passively managed, targeting companies involved in the production, refining, processing, and recycling of metals critical to global electrification. These metals include copper, rare earth elements, and other strategic minerals that are essential to global electrification, supporting power generation, transmission, clean energy technologies, electric vehicles, battery storage, and grid infrastructure. Constituents must also derive at least 50% of their revenues from electrification metals or have at least 50% of their mineral resources linked to these metals. The index provides global exposure across 54 companies and includes large-, mid-, and small-cap firms from developed and emerging markets. The index reconstitutes and rebalances quarterly. Prior to February 13, 2026, the fund was named VanEck Green Metals ETF, and traded under GMET. Before June 1, 2026, the fund was named VanEck Copper and Green Metals ETF, and tracked the MVIS Global Clean-Tech Metals Index.
