

IBGA

iShares iBonds Dec 2044 Term Treasury ETF

Fund Description

IBGA tracks a market-value-weighted index of US Treasury bonds maturing between January and December 2044. The fund will terminate in December 2044.

FactSet Analyst Report

IBGA is part of the iShares Treasury Term Bond suite. The fund tracks the performance of a held-to-maturity portfolio of US treasuries with maturities between January 1, 2044, and December 15, 2044. Instead of the perpetual maturity range of a typical bond fund, IBGA provides exposure to a specific maturity date, similar to an individual bond. As the fund approaches its maturity date, duration and YTM will continue to decline. On its target date, December 15, 2044, the fund will unwind its remaining positions and return capital to shareholders. This structure permits the fund to be used as a building block for a bond ladder or to plan for a future need.
