

IPAC

iShares Core MSCI Pacific ETF

Fund Description

IPAC tracks a market-cap-weighted index of developed Pacific securities.

FactSet Analyst Report

IPAC delivers rock-solid coverage of the developed Asia-Pacific market, namely in the following countries or regions: Australia, Hong Kong, Japan, New Zealand, and Singapore. South Korea is a notable exclusion from this fund, but in this, IPAC also matches our benchmark. IPAC is market capitalization-weighted and may include large-, mid and small-capitalization companies. The fund will generally invest at least 90% of its assets in the component securities of the underlying index and in investments that are substantially identical to the same.
