

# JPMO

## YieldMax JPM Option Income Strategy ETF

### Fund Description

JPMO seeks to provide current income and capped gains on the JPMorgan Chase & Co. stock (JPM) through a synthetic covered call strategy, collateralized by cash and US Treasuries. The actively managed fund uses both standardized exchange-traded and FLEX options.

### FactSet Analyst Report

JPMO aims to generate monthly income while providing exposure to the price returns of JPMorgan Chase & Co. stock (JPM), subject to a cap on potential gains. The fund utilizes a synthetic covered call strategy via standardized exchange-traded and FLEX options, which consists of three elements: i) synthetic long exposure, ii) covered call writing, and iii) US Treasuries for collateral. The synthetic long exposure seeks to replicate the price movements of JPM by purchasing and selling at-the-money calls and puts that have one- to six-month terms. To generate income, the fund writes call options with an expiration of one month or less and a strike price of approximately 0%-15% above JPM's current share price. This limits participation in potential gains if JPM shares increase in value. The short put positions fully expose investors to the downside of the stock. Note: the fund does not invest directly in JPM stocks. Thus, investors are not entitled to any JPM dividends.
