

KFVG

KraneShares CICC China 5G & Semiconductor Index ETF

Fund Description

KFVG tracks a market-cap weighted index of Chinese companies in the 5G and semiconductor-related industries.

FactSet Analyst Report

KVFG seeks to track an index of Chinese companies classified by the Fuzzy Logic Industry Classification System as being in one of the following and related industries (collectively, 5G and Semiconductor-Related Industries): 5G equipment, semiconductors, electronic components, internet and big data centers. KFVG includes all the major share classes: A, B, H, and N-shares, red chips, P and S-chips, and foreign listings. The top 30 companies are selected and weighted based on market cap (combining multiple share-classes) up to a cap of 10%. IPOs may be added to the index prior to reconstitution if the three-day average market capitalization exceeds \$10 billion after the IPO starts trading on an exchange.
