

# LYFE

## 2nd Vote Life Neutral Plus ETF

### Fund Description

LYFE is an actively managed fund that invests in large and mid-cap US companies perceived to meet pro-life social criteria.

### FactSet Analyst Report

LYFE picks companies using both a proprietary research screen and social scoring system. The selection process starts with a universe of US companies with a market cap greater than \$2 billion. Eligible companies then go through a social scoring system where they are scored based on their direct/indirect contributions to pro-life advocacies. All qualified companies start with a score of 3.0, donations to pro-life causes will increase a company's score while donations to pro-abortion causes will decrease it. Those with scores less than 3.0 are excluded. Afterwards, the fund applies an RDY and RPSR screen, which measures yield of a particular stock compared to the yield on the S&P 500 over long periods of time, and how much investors are paying for a unit of sales, respectively. Lastly, companies that pass the previous screens are analyzed according to LTI's proprietary research process (uses fundamental, qualitative and quantitative data), which determines final selection and weighting.
