

# MEXX

## Direxion Daily MSCI Mexico Bull 3X Shares

### Fund Description

MEXX offers daily leveraged 3X exposure to a broad, market-cap-weighted index of Mexican firms.

### FactSet Analyst Report

MEXX provides 3x leveraged exposure to the MSCI Mexico IMI 25/50 Index, a market-cap-weighted index that measures the performance of Mexican equities of all capitalizations. As a geared product with daily resets, MEXX is designed as a short-term trading tool and not a long-term investment vehicle, and should not be expected to provide index leverage returns greater than a one-day period. Thus, investors in this trading vehicle should closely monitor their position and rebalance frequently.
