

NASA

Tema Space Innovators ETF

Fund Description

NASA is an actively managed ETF that invests in companies positioned to benefit from the growth of the commercial space economy, including firms involved in satellite communications, launch systems, and related technologies.

FactSet Analyst Report

NASA focuses on companies engaged in the expanding space economy, investing in businesses that derive a significant portion of revenue from space-related activities such as satellite communications, launch systems, propulsion technologies, and space-based data and infrastructure. The strategy includes both pure-play space companies and firms where space-related products or services represent a meaningful component of operations, including aerospace and defense providers. Portfolio construction is driven by a forward-looking assessment of innovation, with emphasis on companies advancing new technologies, systems, and business models that support the growth of space-based capabilities. The fund invests across market capitalizations and geographies, including developed and emerging markets, and may also hold depositary receipts and select private or less liquid securities where appropriate.
