

PFXF

VanEck Preferred Securities ex Financials ETF

Fund Description

PFXF tracks an index comprised of USD denominated preferred securities and securities that the index provider deems to be functionally equivalent. Securities issued by financial firms are excluded.

FactSet Analyst Report

PFXFs proprietary methodology purposefully excludes the dominant financial sector to deliver a truly alternate exposure to US hybrid debt, preferred stocks, and convertible preferred stocks. Qualifying securities must be exchange listed and have either NASDAQ or NYSE as their primary exchange to be included in the index. No limitations were set with the selection process regarding credit rating and maturity. Constituents are market-cap-weighted and the index is rebalanced on the final trading day of each month. Prior to June 1, 2021, the fund tracked the Wells Fargo Hybrid and Preferred Securities ex Financials Index.
