

# SIHY

## Harbor Scientific Alpha High-Yield ETF

### Fund Description

SIHY is an actively managed fund of high-yield, USD-denominated corporate bonds selected based on a proprietary scientific method.

### FactSet Analyst Report

SIHY seeks total return from an actively managed portfolio of high-yield corporate debt. The fund holds USD-denominated bonds (including those of foreign issuers) of any maturity. It aims to outperform a broader US high-yield benchmark by utilizing a scientifically-driven strategy that uses proprietary quantitative models and insights to produce investment hypothesis which is then back-tested using historical data to determine whether actual observations appear consistent with the hypothesis over time. The fund may also invest in derivatives and ETFs to manage portfolio exposures. SIHY is part of Harbors Scientific Alpha suite along with its sibling fund SIFI which, on the other hand, offers a broad global fixed income exposure.
