

SIXJ

AllianzIM U.S. Large Cap 6 Month Buffer10 Jan/Jul ETF

Fund Description

SIXJ aims for specific buffered losses and capped gains on the S&P 500 index over a specific holdings period. The actively-managed fund holds options and collateral.

FactSet Analyst Report

SIXJ uses options in an effort to moderate losses on the S&P 500 over a six-month period that starts each January and resets in July (or vice versa). The fund foregoes some upside return as well as the S&P 500s dividend component, because the options are written on the price (not total) return version of the index. In exchange for preventing realization of the first 10% of the S&P 500s losses, investors forego upside participation above a certain threshold, which is reset semi-annually. Investors who buy at any other time than the semi-annual reset day may have a very different protection and buffer zone. The issuer publishes effective interim levels daily on its website. The fund must be held to the end of the period to achieve the intended results. The targeted buffers and caps do not include the funds expense ratio. The fund is actively managed, resets semi-annually and uses listed options exclusively.
