

TNUK

Tortoise Nuclear Renaissance ETF

Fund Description

TNUK is actively managed, aiming to give investors pure-play equity exposure to the full global nuclear ecosystem. Companies are selected and weighted based on revenue ties to the industry.

FactSet Analyst Report

TNUK is an actively managed, non-diversified ETF that seeks total return by investing across the full global nuclear energy value chain. Unlike uranium-only funds, it provides broader, balanced exposure to companies involved in uranium mining, reactor design and construction, and the operation and maintenance of nuclear reactors. The fund may invest in companies of any market capitalization globally, focusing on those with at least 50% of revenues or significant strategic emphasis in nuclear industries. TNUK aims to capture growth from the increasing global demand for reliable, clean energy as nuclear transitions into a critical infrastructure sector. The fund concentrates its holdings in the nuclear energy and technology sector, offering investors targeted exposure to the evolution and expansion of nuclear power.
