

UFOD

Tuttle Capital UFO Disclosure ETF

Fund Description

UFOD is actively managed, designed to invest in a portfolio of US companies believed to benefit from the disclosure, confirmation, or exploitation of Unidentified Anomalous Phenomena (UAP) and Non-Human Intelligence (NHI) technologies.

FactSet Analyst Report

UFOD provides targeted exposure to a specific theme in the US equity market. It does so by investing in US-listed companies that may be influenced by developments related to UFO disclosure, including unidentified aerial phenomena (UAP) and non-human intelligence (NHI) technologies. UAP refers to objects observed in air, sea, space, or transmedium environments, while NHI describes phenomena not originating from known human sources. The fund uses top-down thematic screening and bottom-up investment analysis to identify issuers potentially affected by advancements in UAP-related areas. This strategy includes evaluating companies based on their exposure to industries that have historically benefited from scientific uncertainty or exploratory research, without assuming the existence or viability of NHI technologies, aiming to identify issuers positioned for potential growth related to these developments. The fund is actively managed.
