Fund Description

USDU is an actively managed ETF that goes long the US dollar against a basket of global currencies from developed as well as emerging markets.

FactSet Analyst Report

USDU is a long-USD currency ETF that provides short exposure to a basket of different global currencies relative to the USD to capitalize on a rising dollar scenario. The actively managed fund is inclusive of the Australian dollar and several emerging-market currencies, offering a more representative take on the long-dollar. The fund uses derivatives (enters into forward currency contracts with counterparties), so deviations from spot exchange rates aren't out of the question.
