## VictoryShares Free Cash Flow ETF

### Fund Description

VFLO tracks an index composed of the largest U.S. companies based on profit that are perceived to have strong free cash flow yields and high growth metrics.

### FactSet Analyst Report

VFLO utilizes a rules-based methodology to construct its stock portfolio of profitable large U.S. companies. Organizations are screened based on projected free cash flow yield. Free cash flow yield is a measure of an organizations cash flow generated from its operations, minus capital expenditures, required to maintain or grow its business. Companies with a negative projected free cash flow yield are excluded. Eligible securities are then ranked by their free cash flow yields and the top 75 are selected. Each of the top 75 are scored based on growth metrics, such as revenue and earnings, with the top 50 highest scoring selected for the portfolio. The rules-based approach uses a particular set of criteria, relative to free cash flow, to determine the weightings of the different components of the portfolio. Higher weighting is given to organizations perceived to have a strong combination of high total free cash flow and free cash flow yield. For a more balanced representation, individual companies are capped at 4%, with a maximum allocation of 45% to those belonging to one sector. The index is rebalanced and reconstituted quarterly.
